In our daily life money is the most important portion and without it we cannot lead our day on earth but if we keep on track all financial data then we can overcome the problem. The main problem with most of the expense tracking applications is the shortcomings. Current system only supports only one specific currency. The main learning outcome from this system which came in mind is to customize the options to currencies as that users from other countries will not suffer the same problem which they are suffering in the current system. Most of the expense manages applications didn't support multiple bank accounts. Due to the lack of a complete tracking system, there is a constant need to rely on the daily entry of the expenditure and total accumulation till the end of the month. The main objective of this project is to support the user to sustain all financial activities like digital automated data. This application helps the user to avoid unexpected expenses and build financial situations.</p></div>
